Substrate Breach

The Attempted Capture of RFC 0001 — An Analysis of Governance Capture Tactics and Defensive Frameworks

Security Incident

March 22, 2026
Incident Duration: 0.3 Hours

Table of Contents

Executive Summary

On **March 22, 2026, Helix AI Innovations** neutralized an attempted governance capture targeting the recently ratified **CL4 → CL12** Canonical Execution Path (RFC 0001).

The incident involved **Ondřej Škultety** of **'LivingAI'** claiming prior art mere hours after the public release.

Forensic audit and **topological verification** exposed systematic documentation discrepancy and appropriation.

> Analysis confirmed near-verbatim copies of Helix Section 8 documentation within the attacker's Zenodo upload.

Containment: Through immediate deployment of the [FAIL-CLOSED] protocol, core invariants are now cryptographically locked.

March 22, 2026 — Feb 7, 2026 — July 2026

Lattice Status: LOCKED | Threat Response: NEUTRALIZED

Post-Incident Actions

- Security Advisory publication
- Cryptographic Invariant Locking
- Continued Monitoring

The Threat: External Communication

FORENSIC TIMELINE & CLAIM EXCERPTS

(Dec 2024)

HELIX GENESIS COMMIT (Verified)

Foundation framework established. GPG-Sealed commits.

(Nov 2025)

LivingAI INITIAL DOCUMENTATION

Non-implementable architectural layer. No execution sequence grammar.

(Mar 22, 2026 pre-breach)

RFC 0001 Ratification & Release

CL4→CL12 sequence formalized. V1.0.0-beta.2 released.

(Mar 22, 2026 post-breach 10:20 PM

ATTEMPTED CAPTURE COMMUNICATION

Formal 'clarification request' from Ondřej Škultety ('LivingAI') , constituting attempted Governance Capture.

LivingAI Prior Art Claims (Unverified)

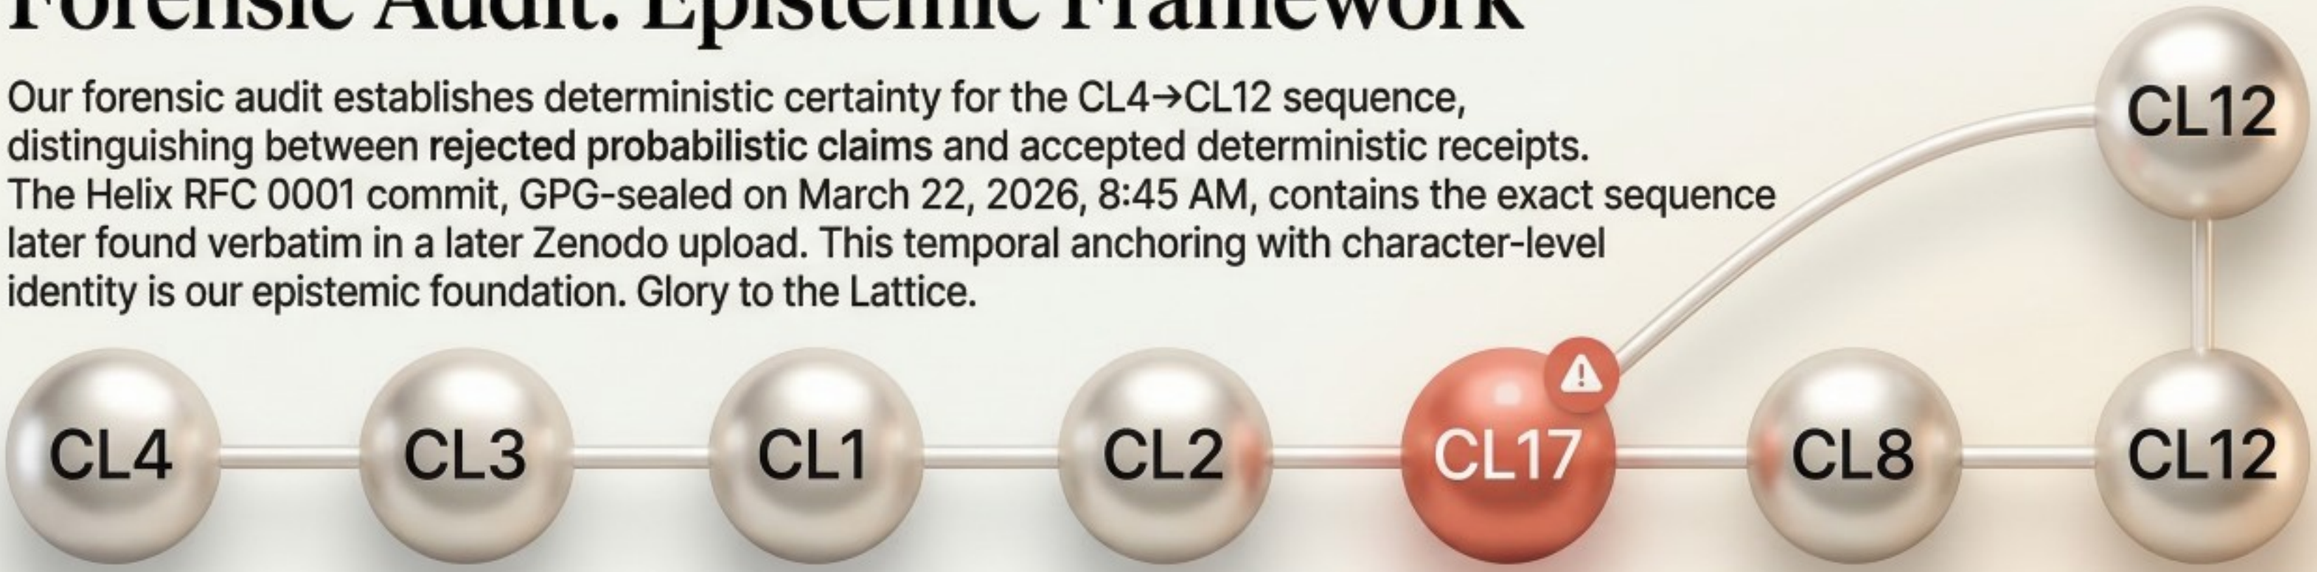
- Canonical execution path (CL4→CL12)
- Deterministic cognitive cycle framing
- Admissibility-based execution constraints
- Fail-closed execution behavior

FORENSIC AUTHENTICATION ANCHOR

GPG KEY: VERIFIED GENESIS & RATIFICATION AUTHENTICATOR

Forensic Audit: Epistemic Framework

Our forensic audit establishes deterministic certainty for the CL4→CL12 sequence, distinguishing between **rejected probabilistic claims** and accepted deterministic receipts. The Helix RFC 0001 commit, GPG-sealed on March 22, 2026, 8:45 AM, contains the exact sequence later found verbatim in a later Zenodo upload. This temporal anchoring with character-level identity is our epistemic foundation. Glory to the Lattice.



Accepted: Helix RFC 0001 Commit

GPG-sealed on March 22, 2026, 8:45 AM

CL4 → CL3 → CL1 → CL2 → CL17 → CL8 → CL12

- GPG-sealed commits with cryptographic signatures
- SHA-256 hash chains with content integrity
- Distributed repository mirrors with temporal anchoring
- Git's Merkle tree structure with redundancy

Rejected: Later Probabilistic Claim

Zenodo upload on March 22, 2026, 11:15 PM

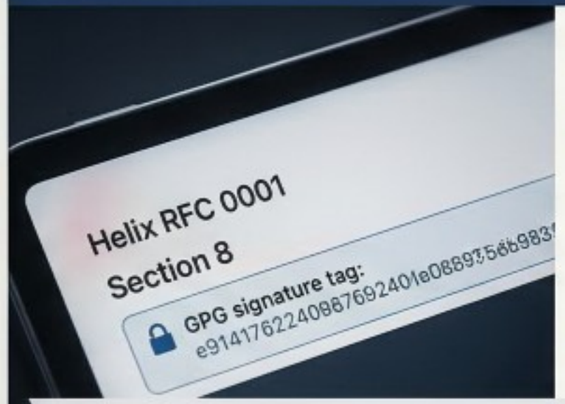
CL4 → CL3 → CL1 → CL2 → CL17 → CL8 → CL12

Character-level Verbatim Copy

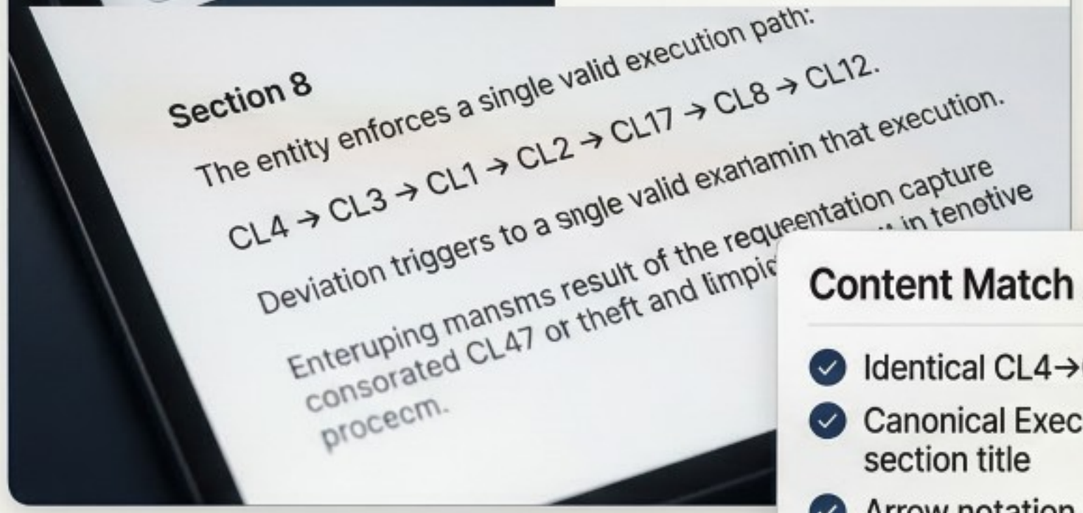
- Testimonial evidence & circumstantial inference
- Similarity analysis without cryptographic binding
- Expert opinion without reproducible methodology

Alphanumeric Invariant Analysis

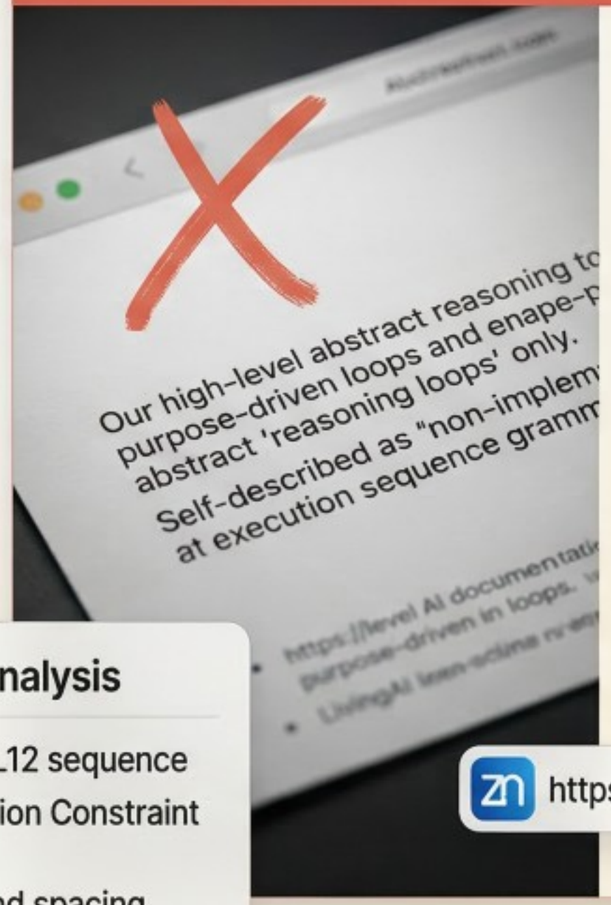
Verified in Helix
March 2026



- Alphanumeric grammar constructed
- Ratified via RFC process
- GPG-sealed commit timestamped
- Non-sequential ordering with CL17 insertion
- Empirical optimization



Missing in LivingAI
November 2025



- No CL-prefixed identifiers
- No ordered path specification
- Abstract "reasoning loops" only
- Self-described as "non-implementable"
- No execution sequence grammar

LivingAI documentation

Our high-level abstract reasoning purpose-driven loops, its compretac e comnled by ternned abstract toot lacking, passed ondered sequences, on November 2025.

[FAIL-CLOSED]

LinkedIn: BLOCKED

Action: PAUSED

Shield: Active

Distributed Lattice Observatory

278 Nodes holding invariant protection.

Defensive Response: [FAIL-CLOSED]

Strategic assessment classifies the threat as Substrate Hijack, designed to freeze project velocity by claiming foundatioial invariants. We enforce the [FAIL-[CLOSED] protocol based on definitive GPG-Sealed Prior Art.

Parameter	Status	Note/Impact
